

Duel Shooter 3D Documentation

Overview

The **Duel Shooter 3D** project is thoughtfully developed and user-friendly. Function names are clear, and scripts provide step-by-step guidance. This documentation explains the project folders functions. If you encounter any issues, please contact us at blackrosedevelopers@gmail.com.

Project Structure

1.Art

Art folder is subdivided into five folders.

A. Materials

Contains subfolders with 74 various materials used in the game, which can be customized with different colours or sprites.

B. Sprites:

Contains 17 PNG which can be used for UI and Gameplay

C. Animations:

Contains 3 animations of characters

D. Textures:

Contains 34 PNG textures that can be applied to materials in the game

E. Models:

Contains 7 FBX 3D models

2. Prefabs

The Prefabs folder includes eight main categories with 79 prefabs:

- **Weapons:** 8 prefabs of different weapons in gameplay for level design.
- **Items:** 7 prefabs of different items in gameplay for level design.
- **Objects:** 10 prefabs of different objects such as rocks used in the gameplay for level design.
- **Particles:** 18 unique particle effects with different materials.
- **Player:** 4 prefabs of player which must be used in all levels
- **Projectiles:** 5 prefabs of different weapon and bullet projectiles that are required to be used in gameplay for level design.
- **UI:** 9 prefabs of the game menus.
- **Gameplay:** 16 prefabs of different game items such as camera and etc.

3. Scenes

- **Scene-0:** Sample level 1 with all prefabs used
- **Scene-1:** Sample level 2 with all prefabs used
- **Scene-2:** Sample level 3 with all prefabs used
- **Scene-3:** Sample level 4 with all prefabs used
- **MainMenu:** the starting scene of the game

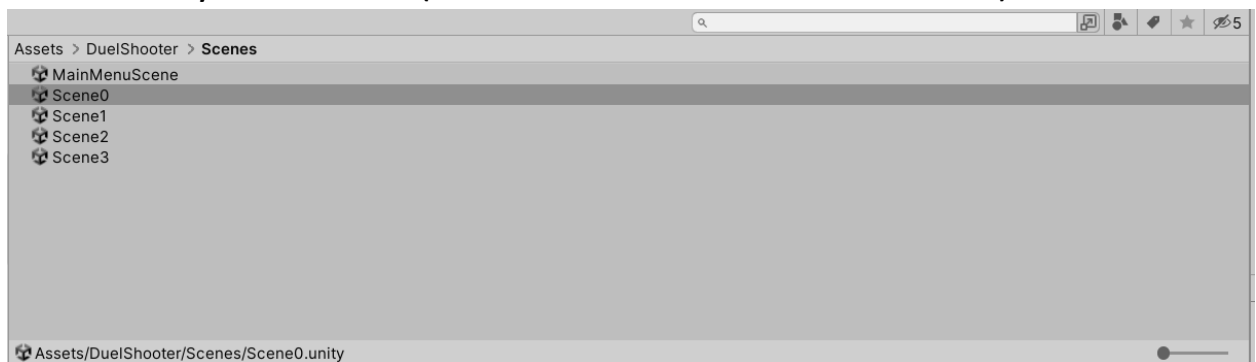

4. Scripts

50 Scripts are categorized into two folders, with clear names and functions to ensure easy understanding.

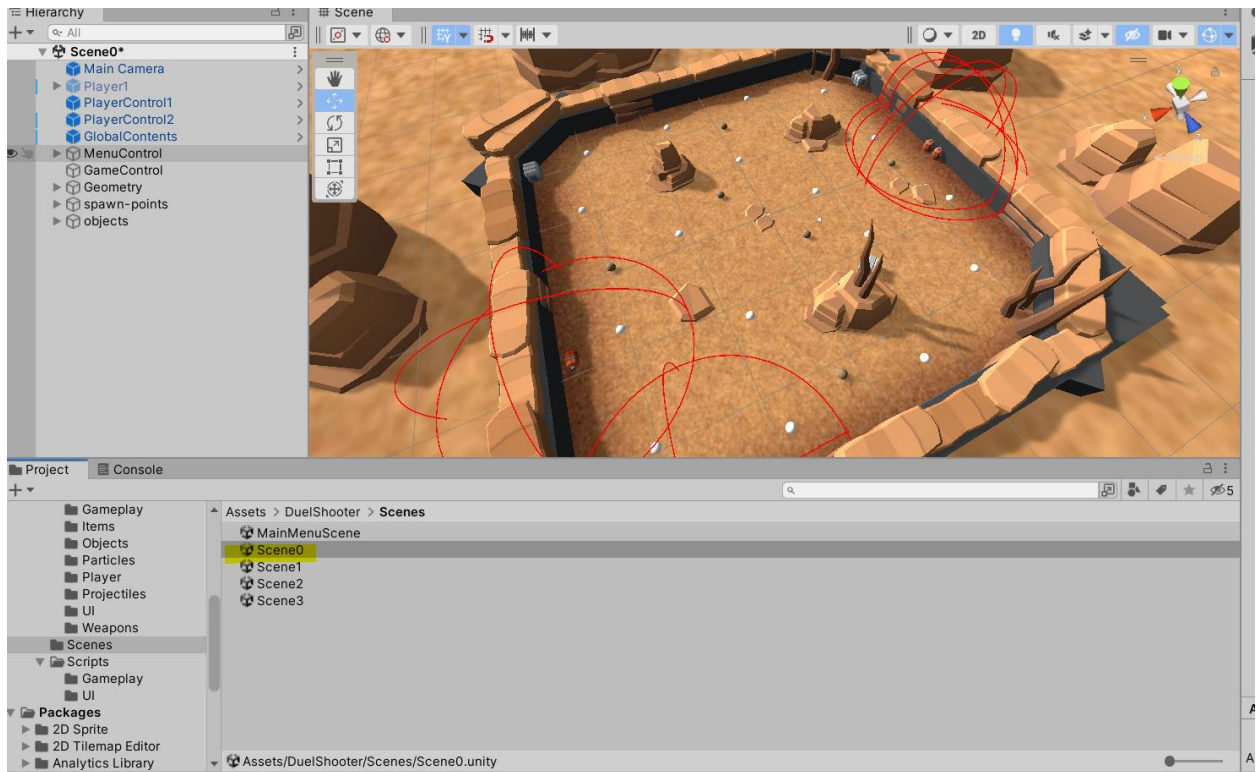

How to add new levels:

Levels should be designed in 3D scenes

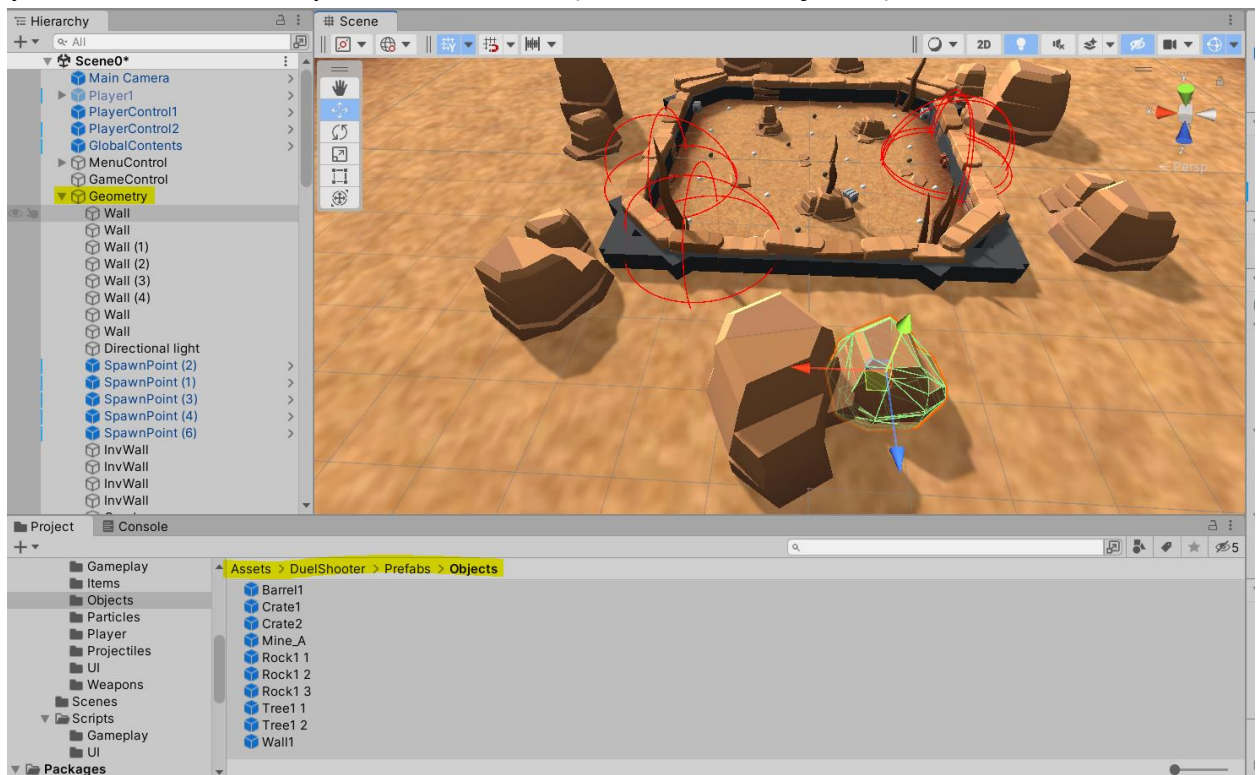

- 1- Navigate to Project – Scenes folder. For the start we have 4 sample levels that you can see. (Scene0 , Scene1, Scene2, Scene3)

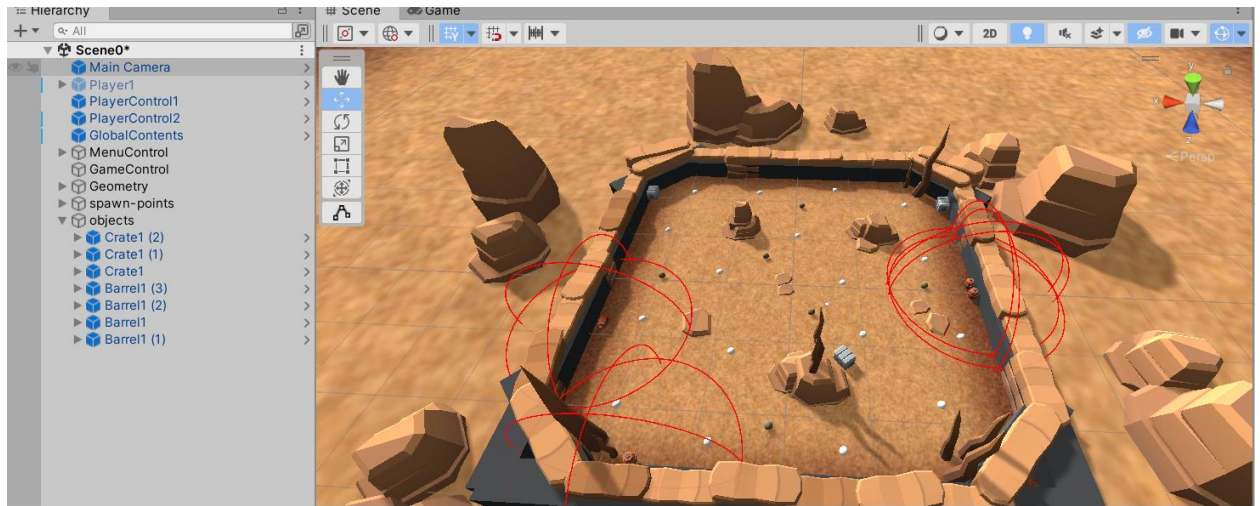

- 2- The best way to add a new level is to copy one of the 1-4 level scenes and then start changing the level design. Double click on your new level scene to enter and start modifying.

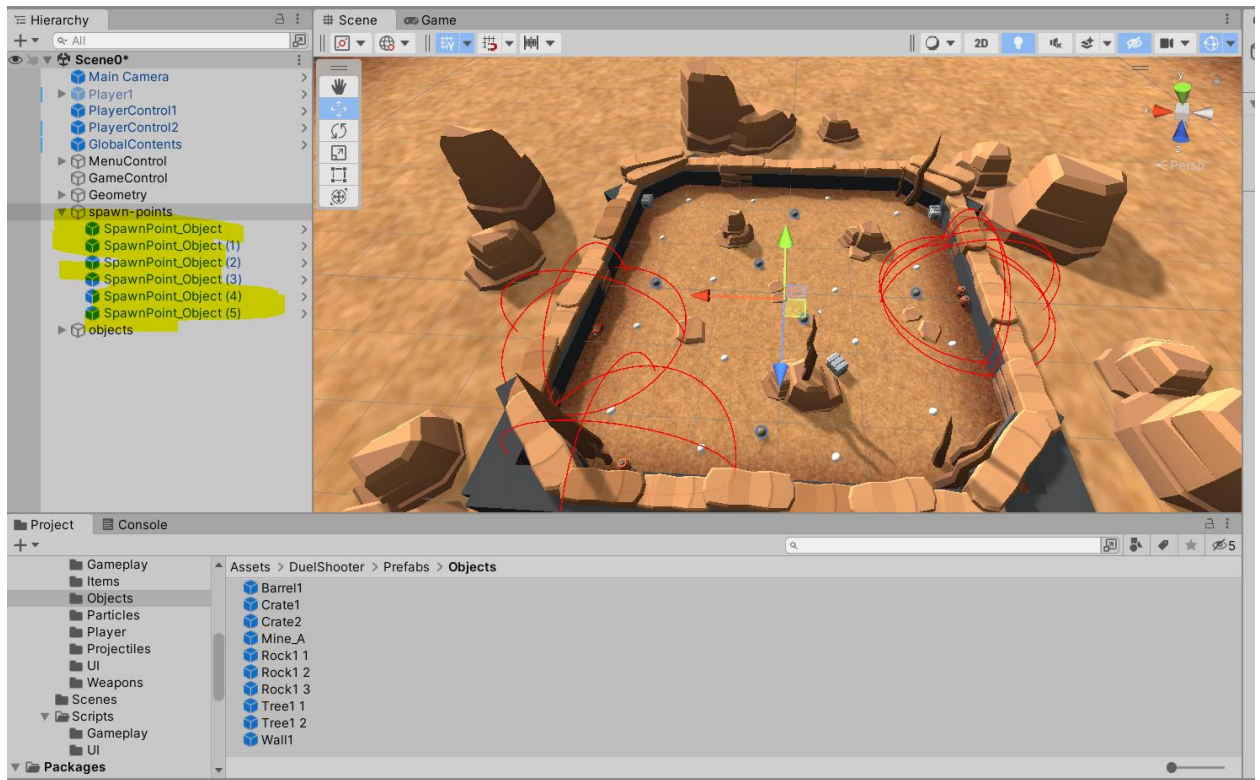

3- Find Geometry Game object in the scene. You can add different items such as Rocks or Trees or different backgrounds according to your theme from prefabs folder. (Prefabs – Objects)

- 4- You can put different object in your level from prefab – objects folder. Here I decided to have some barrels and crates.

- 5- There is also spawn-points gameobject which includes points where helping boxes are fallen. You can create different spawnpoint in your level design.
